Hello, I am still trying to replicate table 11.1 Nutritional status of children. I have a few more questions;
1. Which variables in data file UGPR60FL.DTA are used to generate;
 a) Size at birth
 b) Mother's interview status
 c)Mother's nutritional status
2. How do you generate "first birth"-under "birth interval in months" using hc63 (preceding birth intervals(months))

Thanks

Gabriel
