Hello everyone,

I am having the same Problem as described above. Wouldn't it be possible to identify Children from BR in PR based on the household [hv000 hv001 hv002], Mother's line number [hv112], age [hv105] and sex [hv104]. The only problem I see so far is that we can not distinguish between children born to the same mother with same age and sex which should however only occasionally be the case (twins). Please correct me if my story does not make sence!

Thank you!
