Dear all,

Is it safe to assume that sh123 in Nepal 06 survey data is coded a similar way to the sh120 in Nepal 2011? That is, if in the Nepal '06 data sh123 equals 101 does that indicate 1 bigha? and if sh123 equals 201 does that indicate 1 ropani?

what are the conversion factors to go from bigha to hectare and ropani to hectare?

thanks so much!

Sarah
