Dear Trevor,

Hope this finds you well. I have been successful on Qn. 1 a) Birth size (replicated all) and partly on Qn.2 Birth interval (only values for "missing" do not match. I have 330 obs for missing instead of 331 shown in the report).

Qn. 1b) which variable is used for mother's interview status? after merging IR, PR & KR it is confusing!(can't see one with interviewed, not interviewed but in house etc..).

Qn. 1c) Why drop ha40 and again merge? from 1a)we have PR & KR files and ha40 exists and not empty. However it seems like this BMI/ha40 is for women not interviewed because when you tab ha40 v015, there are no obs, tab ha40 hbel\_minus3 still don't link up!

thanks for the continued support.

Gabriel
