Dear Liz-DHS,

Sorry to bother you again about the same issue. I used the values you sent me for Rwanda to calculate the CWI and compared the mean and std to the ones in table 3.1 in that following report http://dhsprogram.com/pubs/pdf/MR9/MR9.pdf.

Are the ones you sent me new updated alpha and beta scores or were they similar to the ones used in the report?

Specifically, I Variable	Obs	Mean			Max
•			.3508722		1.913442
Variable					⁄lax
-			.7187736		3.206589
Variable			Std. Dev.	Min	Max
			.5081679	2533463	4.451288
			Std. Dev.		Max
•			.46742		3.969633

whereas in table 3.1 they are different for all four cases.

Thank you again for your help!
