
Subject: Weighting when combining datasets - AIS and non-weighted datasets

Hi,

I am combining two datasets - the Mozambique 2009 AIS and another survey performed in Mozambique that does not need to be adjusted for survey weights. How should I assign survey weights and PSU/strata values to the non-weighted dataset? While I could apply a "1" as the HIV weight, I think I also need to apply a value to the PSU and the strata.

Here is my code for the AIS data:

```
gen HIVweight = hiv05/1000000
```

```
svyset v021 [pweight=HIVweight], strata(v022)
```

Thank you,
Stephanie
