Dear DHS team,

Please i need your help in computing Exclusive Feeding variable in SPSS. I tried to compute myself by following instruction given in this guideline (http://apps.who.int/iris/bitstream/10665/44306/1/97892415992 90_eng.pdf?ua=1) page 34.

Calculation: (IYCFAGE < 183) AND(V404 =1)AND(V409 - V413D all=2)AND(V414A - V414W all=2) / IYCFAGE < 183 * 100

However i get the message saying " The expression is incomple. Check for missing operands, invalid operators, unmatched parentheses or excessive string lengths.

Can you please help me solving this.

Waiting with great hope.

Thank you,
Anupa
