A very helpful information shared.

I have another query that was the last part as i mentioned in my first thread on this issue, i.e.,

Whether the pregnancy resulting in (i) live birth (ii) miscarriage (iii) abortion (iv) spontaneous.
Nominal variable

Here i wish to have variable with multinomial structure indicating the above four categories explicitly. In PDHS (2012-13) we have a table 5.15, chapter fertility and page number 80. Here the variable is presented in multinomial form. I could not find it in datafiles.

another thing i want to make clear.

Which of the following file will be suitable for taking account of abortion status i.e. (i) live birth (ii) miscarriage (iii) abortion (iv) spontaneous

1. BR File
2. KR File
3. IR File

Thank You
