A very helpful information shared.

I have another query that was the last part as i mentioned in my first thread on this issue, i.e.,

Whether the pregnancy resulting in (i) live birth (ii) miscarriage (iii) abortion (iv) spontaneous. Nominal variable

Here i wish to have variable with multinomial structure indicating the above four categories explicitly. In PDHS (2012-13) we have a table 5.15, chapter fertility and page number 80. Here the variable is presented in multinomial form. I could not find it in datafiles.

another thing i want to make clear.

Which of the following file will be suitable for taking account of abortion status i.e. (i) live birth (ii) miscarriage (iii) abortion (iv) spontaneous

- 1. BR File
- 2. KR File
- 3. IR File

Thank You
