Subject: child labour data

Hello,
I would like to work with the child labour data available for some countries/years. I figured out that some of the questions on children's work are in the PR files (Household Member Recode) but I am unable to find these questions on the DHS Recode Manual to check what the variables actually contain. I don't want to just go by the variable label in the data set. Has anybody worked with these variable and knows where to find a description for it? Thanks!
