Dear all,

I am trying to do a child labour analysis and need info on mother and father of 5-14 years old children. I have been able to generate mother and father education using the household member recode data from Mali 2001 however I need a variable for mother and father's occupation which I think can be found in women IR dataset. Can anybody assist me on how to generate this variable and merge it to household member recode dataset ? Thank you.
