Hi DHS team and All DHS users

I need your help to create exclusive breastfeeding variable from 2012 DHS data (Indonesia)
Which variable we can use to get the "current age of infants in months" since variable HW1 or
HW1_1 doesn't have any value in my dataset.
for exclusive breastfeeding I need to take infants aged 0-5 months only.
Could you do me a favor?
How do you get exclusive breastfeeding variable?
(I'm using SAS)

Thanks anyway

Putri
