In the pdf document for "Congo Democratic Republic DHS, 2007 - Final Report (French)" (<https://dhsprogram.com/pubs/pdf/FR208/FR208.pdf>), it is written that the RDC has around 40 ethnic groups, mainly the "bantous", the "nilotiques", the "soudanais" and the "pygmés".

From the individual recode we have:

. lab list v131

- 1 bakongo north and south
- 2 bas-kasai and kwilu-kwngo
- 3 cuvette central
- 4 ubangi and itimbiri
- 5 uele lake albert
- 6 basele-k , man. and kivu
- 7 kasai, katanga, tanganika
- 8 lunda
- 9 pygmy
- 96 others

So this is strange as most of what it is labeled as an "ethnicity" seems to be a region..

Any reason why?
