---

I can extract cluster numbers from the 2008 Nigerian DHS without problems, but in the DHS (the GPS data) for 2013 all "DHSClust" are a "NaN".  
I am using Matlab and shape read

```
test2008 = shaperead ('NGGE52FL')  
test2013= shaperead ('NGGE6AFL')
```

Anyone has an idea what is going on?

/erik
