Dear DHS forum:

My name is Sami. I have been trying to reproduce table number 8.4 as shown in Nepal Demographic and Health Survey 2011 report, page number 117. I used NPIR60FL and NPBR60FL data files and with the help of message number 8646 and 8648, I have been able to re produce similar table but I am still struggling to calculate previous pregnancy interval in months.

which variables I should be using to calculate pregnancy interval in months that match with number of pregnancies of 7+ months' duration.

I would be thankful if you can guide me through to calculate this.

Regards
