First of all, I should apologize for the duplication of my question & (in other post) Tom Pullum has replied to my question as well. No, it has not obscure anything. And in the light of what Pullum has suggested for re-scaling the weights and acknowledging size of base population, your comment is very helpful. As you noted out that this is an "it depends" kind of thing, it is more difficult to go in one direction and defend that point of view to reviewers.
