---

I am doing a comparison over time by using the 92-93 and 98-99 Indian surveys. In going over the 92-93 dataset, I could not find any summary measure of standard of living that is comparable to SSLI from the

98-99 dataset. If it hasn't been constructed, could you tell me how it was constructed for the 98-99 survey so that i can compute it for the earlier one as well. Also, I couldn't find any identifier for village in the 92-93 survey. I am planning on doing a multilevel model so I need to decide what the second level will be (I want to keep it below a district).
