Sorry, the example given before was for a survey with a calendar, but Ethiopia 2000 does not have a calendar.

Instead, you may want to look at the example code in the linked message. This code refers to Nepal 2001 data, but the concept is very similar. The EDHS 2000 uses a pregnancy history, and the pregnancy history variables needed can be found in the variables S231AC\*, and S231C\*.
