Thanks again. I have run the codes but still a bit confused. My question may seem out of place. Would I be merging this new file with the IR and MR or can I go ahead to use the PR recode. This is because the PR does not have some variables I am interested in (number of siblings, religion). I am also confused as to how to use the variables. For e.g, can I assume hv105 to be the age of respondents?
