The PMI Case Management team reviewed the questionnaires to look at the series of questions regarding child illness. Our comments are listed individually in the Maternal/Child health section of this chat room, but for those who are looking for malaria information in the ID section, I have attached a short summary of our responses here.

Some of the individual comments referred to in this post are located in the MCH folder, and others are located here in the "Infectious Diseases" folder. Please see the document "Existing questions organized by category" in the READ ME folder to see how questions have been classified for purposes of the forum.

We are aware that many of the questions in the DHS Questionnaires cut across numerous subject areas, however, each existing question in the questionnaires has been classified under just one topic for purposes of the Forum.

Rest assured that discussions of questionnaire content will be conducted among all relevant subject experts (and not be limited by which folder questions have been categorized).

Input to the review process has been fabulous, thanks.
