A joint meeting of the PMI Malaria in Pregnancy group, MCH, and HIV suggested that there be a pregnancy module (as a pilot for now - not part of core) to collect data on ALL pregnancies. Currently we do not have info on pregnancies that do not end in a live birth, yet many programs need information on those events, including care seeking behaviours, and care provided. We would be interested in working with the survey team on such a module. Cross-posted with the MCH section.
