---

Hi I am using the 2015 MIS survey for my dissertation however I having trouble merging the household dataset which is KEPR7ADT with the womens/individual dataset which is KEIR7A on STATA. Please can anyone let me know what to do , i have tried using the guidance provided on the dhs website but it did not work.

this is the code i used:

```
use "/Users/t/Desktop/Actual dataset/PR2.DTA"
```

```
rename hv001 v001
```

```
rename hv002 v002
```

```
sort v001 v002
```

```
save "/Users/Desktop/Actual dataset/PR2.DTA", replace
```

```
use "/Users/t/Desktop/Actual dataset/IR.DTA"
```

```
sort v001 v002
```

```
merge m:1 v001 v002 using PR2
```

I received the error message that the variables v001 v002 do not uniquely identify observations in the using data

I dont know what i did wrong as this is what the dhs guide says to do . Pls help

thank you so much,

toyosi

Following is a response from DHS Research & Data Analysis Director, Tom Pullum:

You need to include line number. In the PR file that's hvidx and in the IR file it's v003. Just change to the following:

```
use "/Users/t/Desktop/Actual dataset/PR2.DTA"
```

```
rename hv001 v001
```

```
rename hv002 v002
```

```
rename hvidx v003
```

```
sort v001 v002 v003
```

save "/Users/Desktop/Actual dataset/PR2.DTA", replace

use "/Users/t/Desktop/Actual dataset/IR.DTA"

sort v001 v002 v003

merge m:1 v001 v002 v003 using PR2
