Hi team,

I am working on Rwanda DHS 2014-15 using RWKR70FL and RWGE72FL, I want to interpolate Stunting at the sector level
I have been constrained to merge both datasets using R since the number of rows is not the same for both dataset
I need help.

Thank you

Hi Similien N,

The KR file list individual kids and the GE file is at the cluster level. You either need to produce cluster-level estimates or do a one to many merge

best,

--Tom

Good evening

Thank you for your assistance!

I have just managed to merge two datasets but I fail to estimates stunting at the district level using R.

May I have assistance on it?

Thank you once again

Best Similien

Hi Similien.

Are you using INLA-SPDE?

Hi,
Yes, I am using INLA-SPDE
