Greetings!

I am working on Bangladesh DHS 2017-18 data to prepare a few community-level variables including access to different types of health facilites. More specifically, Table 15.7 & Table 15.8 of BDHS 2017-18 report. Is there any Stata code for replicating the table?

Thanks in advance.

SR

Stata and SPSS code for matching/calculating DHS indicators are available on GitHub.

The code repositories can be found at:
https://github.com/DHSProgram/DHS-Indicators-Stata
https://github.com/DHSProgram/DHS-Indicators-SPSS

Sorry, we do not have Stata code for replicating these tables. The tables were produced in CSPro.

Hi Trivor,

Thanks for your response. Would it be possible to share the CSPro code or any instruction to calculate those variables. Then I will be able to prepare such code in Stata.

Thank you.

Regards,

Rahman
