Subject: Getting delivery indicators for disabled mothers Posted by Zandam on Sun, 21 Mar 2021 15:17:26 GMT View Forum Message <> Reply to Message

Hi, I am working reproductive health outcomes among women with disabilities. The disability status variables are only in household files. Which is the best merging approach will you suggest for me to get a sample of delivery indicators for children of women by disability status?

We have had countless postings on the topic of merging household and women datasets. If you search with keywords "merge" or "merging", you should find answers to your questions.
