Hello

I am using the 2015 Zimbabwe Demographic Health Survey (ZDHS) dataset to analyse the effects of drug stockouts on the maternal health outcomes. However, I have realised that there are no observations for the variable m49a (denoting if the person took sp/fansidar during pregnancy) but observations for the same variable are available in 2010/2011 dataset. I wanted to confirm if the question on use of fansidar/sp was not asked in 2015 or otherwise. And if it was asked, may I kindly have the observations for the variable m49a.

Regards

There are no observations because that information was not collected.
