Hi,

My research is a comparative study of reproductive health in Nigeria and South Africa. Is there a possibility of doing a decomposition and multi-level analysis using SPSS?

Your guidance will be appreciated.

Kind regards

Following is a response from DHS Research & Data Analysis Director, Tom Pullum:

It is certainly possible to do such analyses. Here at DHS we mainly use Stata, not SPSS. We can provide some help related to using Stata and the standard recode files, but not related to your statistical models.

Many thanks for your prompt response. I would appreciate your help using Stata.
