DHS may want to consider adding the following questions that were recently validated in a study in Mozambique (PLoS One). They could be included in the core questionnaire or in an optional maternal health module.

- a. Woman had companion present during the labor OR delivery
 - b. Woman had her labor augmented with injection
 - c. Woman received fundal pressure before birth of the baby
 - d. Woman received fundal massage after delivery of the placenta
 - e. Women received emergency c-section
-
