Subject: How to use Weights for HIV and Women data Posted by idas on Fri, 29 Mar 2013 17:33:53 GMT

View Forum Message <> Reply to Message

I am analyzing the Ethiopia DHS data and I have combined the Women and HIV datasets.

Which weights should I use for tabulations: V005 or HIV05?

Thank you.

Them is evaluationage with the payment and the second of

Here is a reply from one of our DHS experts Guillermo Rojas:

Any analysis conducted with HIV data should use the HIV weight (HIV05/1000000). The reason is because the HIV weight incorporates the adjustment for HIV non-response.

Hello,

I'm also working with the individual women's and HIV datasets. Are you using Stata? If so, can you provide me with the steps you took to combine the two?

Thank you.

Dear User,

There is a section on our website about meging datasets http://www.measuredhs.com/data/Merging-Datasets.cfm I think this might help you in thinking it through.
