Hello there,
Can anyone please tell me where will I find the information on the total number of cases and households in each stratum which were used to draw sample for the NFHS-5 of 2019-2021. I also need the total no. of households in the country that was used to draw the sample in NFHS-5. Actually, I need these information to calculate weights for level 1 and level 2. Thanks in advance.

Following is a response from DHS staff member, Tom Pullum:

The DHS GitHub site includes instructions for doing this with NFHS-4:
https://github.com/DHSProgram/DHS-Analysis-Code/tree/main/Multilevel_Weights/India .
NFHS-5 used the same design and sampling frame, so you should be able to get what you want by modifying appropriately.
