Hi,

Please share the NFHS 5, file names that can be used to recreate the table on child mortality (7.2& 7.3) and table adult age specific mortality rate. 12.9.

Regards
Lincoln

Following is a response from DHS staff member, Tom Pullum:

The Under-5 mortality rates are always calculated from the BR file. The data for tables 12.9 through 12.12 in the NFHS-4 and -5 report are in the HR files. The questions about deaths in the household in the past two years are not standard for DHS surveys

Many thanks for the kind response. I am finding it difficult to map the DHS guidelines: https://dhsprogram.com/data/Guide-to-DHS-Statistics/Adult_Mo rtality_Rates.htm and the HR file variables for the age specific mortality in NFHS-5.

I would like to request for help.

Regards
Lincoln

Following is a response from DHS staff member, Tom Pullum:

I am working on the construction of tables 12.9-12 in the NFHS-5 report. These are not standard

tables. We will post a response soon.

This is to request support for the table 12.9 through 12.12 for NFHS 5

Regards
Lincoln

Dear Bridgette,
Please let me know if there is any way I can calculate the adult mortality rates.

looking forward to your kind response

Regards
