In this process, I am trying to create the tables in the India: DHS, 2019-21 - Final Report (English). I used the code shared by the DHS team on Github. However, I was unable to create the relevant tables from these code. The relevant tables are Table 8.1 to Table 8.32. I want to request you to kindly shared the code for these tables. It would enable me to do more analysis and help me save time in writing code which has already been written. Kindly consider and please let me know.

Following is a response from DHS staff member Tom Pullum:

We apologize for the delay with this response. The computer code that actually produced the tables in the NFHS-5 report was written in CSpPro, not Stata. We could share that code, but it is difficult to read and (more important) the hierarchical data file that the code was written for is not available. We do not have already-prepared Stata programs written specifically for this survey.

I think the best approach will be to find why the standard GitHub code is not working for you. Please describe what happens when you try to run it. We will then try to diagnose the issue quickly.
