Dear Sirs,

What is the minimum number of observations required to calculate a child (or maternal) health indicator such as Measles (MCV) immunization coverage among 1-year-olds (MIC)(%), children aged <5 years with ARI symptoms taken to facility (%), etc at the district level?

I need to collapse Egypt DHS individual recode data at the district level, then calculate some child (or maternal) health indicators. The problem is that some districts have got 15 observations only.

Thank you.

Sincerely,
Amira
