Dear DHS users,

I am a new DHS Survey user and would like to become more familiar with the datasets by replicating what previous papers have found using DHS Surveys. I am aware of and have become familiar with the Guide to DHS Statistics and the DHS Recode Manuals, but I will feel much more comfortable analyzing the surveys if I can check my work against someone else's. Does anyone know of any particular papers whose author(s) make their code/dataset available? I use Stata so it would be ideal if any authors who also use Stata for analyzing DHS Surveys can make their code/dataset available. In particular, I am interested in addressing questions regarding gender issues, especially child marriage, and also child health and couples' characteristics to investigate other issues regarding marriage.

Thank you in advance.
