Hello Team,

I'm attempting to analyze the household member data based on the age of the respondent, but I'm unable to find the corresponding age variable. Can you provide some guidance on how to proceed with this analysis?

Following is a response from DHS staff member, Tom Pullum:

Users are requested to say which survey they are working with. In general, in the PR file, age in completed years is given by hv105. For children under 5, age in months is given by hc1.
