Good day,

Which data set is best to use for women's family planning?

I was initially using the couples recode because I wanted to create a variable that shows spousal age-differential, however, I am not sure that I am doing the right thing.

So, please which data set is the best for women's family planning?

Thank you.

Thank you for submitting your question. Could you please provide some more detailed information so we can better advise you?

Can you let us know:

- Which survey you are using (Include country name and year)?
- Which data files you are referring to?
- Which software you are using (Stata, SPSS, R, etc.)?

If you are trying to match a Table in a final report, please also indicate which table and which estimate you are trying to match.
