Good evening!

Please I use DHS (IR) data from several African countries to calculate the discontinuation rate of modern contraceptive methods. I followed the guidelines given by the DHS and got the rates including the traditional methods. Any changes I have made to have only modern methods rate are unsuccessful. I turn to you: how to get the discontinuation rates only for modern methods?

Thanks for your help

Please share the code that you are currently using and I will review it and provide the adjustments necessary to produce results only for modern methods.
