Subject: Merge GPS with Children data

Posted by Manou on Mon, 18 Sep 2023 08:14:14 GMT

Good morning Dear Members of DHS

I would like to merge DHS with Children Data

First in children data i created this variable : egen new_cluster_ID = concat(v000 v001), punct(-)
Then , in GPS data, i creayed the same variable: egen new_cluster_ID = concat(DHSCC DHSCLUST), punct(-)

After that, i apply this command: merge 1:1 new_cluster_ID using
"C:\Users\ndjak\OneDrive\Bureau\Merge\base_finale.dta"

but i received this message: variable new_cluster_ID does not uniquely identify observations in the using data

I do no know how to do, please can somebody help me?

THank you,
Manou
