I want to have a database of children's weight (that is, only children aged 0-5 years) with date of birth, all anthropometric variables (weight, height, etc.), breast variables (age , education) and household socioeconomic status variables.
How can I merge the databases and get that information?
thank you for your time

Following is a response from Senior DHS staff member, Tom Pullum:

All of these variables are in the KR file. (I am not sure what you mean by "breast variables" but the KR includes breastfeeding data and the mother's age and education.) If you have other questions about the data files, please tell us which survey you are using.
