Hi,

I am trying to replicate table 5.12 in KDHS 2022 Report using attached do file but I can't seem to see the indicator on ever been pregnant. Any help will be appreciated.

Thanks in advance!

Stephen.

Following is a response from Senior DHS staff member, Tom Pullum:

Below I will paste the Stata code to construct the indicators in table 5.12, on Teenage Pregnancy, in the Kenya 2022 report. I just wrote this as a one-off program but I believe it is included in the new GitHub programs for DHS-8 surveys. The pregnancy history variable p32 is crucial for new tables such as this one.

```
use "...KEIR8AFL.DTA", clear
```

- * Construct table 5.12, teenage pregnancy for Kenya 2022 DHS survey
- * Two columns can be constructed without the pregnancy history
- * Two columns require the pregnancy history

```
* v201: number of live births
```

```
* v213: currently pregnant
```

```
gen ever_birth=0
```

```
replace ever_birth=100 if v201>0
```

```
gen curr_preg=0
```

```
replace curr_preg=100 if v213==1
```

```
* ever_loss and ever_preg require the use of p32_*
```

```
label list P32_01
```

```
*remove leading zeros
```

```
rename *_0* *_*

gen nlosses=0
forvalues lp=1/20 {
replace nlosses=nlosses+1 if p32_`lp'>1 & p32_`lp'<.
}

gen ever_loss=0
replace ever_loss=100 if nlosses>0

gen ever_preg=0
replace ever_preg=100 if p32_1<. | v213==1

label variable ever_birth "Ever had a live birth"
label variable ever_loss "Ever had a pregnancy loss"
label variable curr_preg "Currently pregnant"
label variable ever_preg "Ever pregnant"

local lcovars v012 v025 v106 v190
foreach lc of local lcovars {
tabstat ever_birth ever_loss curr_preg ever_preg [fweight=v005] if v013==1, statistics(mean)
by(`lc') format(%6.1f)
}
```
