Hi

I am trying to replicate the analysis - Table 2.12 School attendance ratios in KDHS 2022 main report using the attached do file whose content is from the do files in the GitHub repository. However, I can't seem to arrive at the value of 80%. Any advice is appreciated. Thanks in advance!

Following is a response from Senior DHS staff member, Tom Pullum:

Earlier today I posted a response to a question from another user about the school enrollment data in the KE 2022 survey. The table produced by "tab hv124 hv122" suggests that there was a coding error with hv124. If so, it may have affected other hv12* variables as well. That may be the reason why you are not getting a match. We are looking into this. More soon.
