Does anyone have the code to replicate Table 7.6 for BD SPA 2017 data?

Hello,

As described in the title of the table, the facilities are limited to those offering normal delivery services, so where q102_07==1. You then need to use the svy command to take into account the survey design and facility selection. I have included code below for the first column "Antibiotics". You can recreate the same code for the remaining columns using the information from the table.

```
egen strata = group(factype region)
svyset [pw=fwt], psu(facil) strata(strata) singleunit(centered)
svy: ta q102_07
```

```
keep if q102_07==1
```

```
recode q1604b_1 (.=2)
```

```
svy: tab q1604b_1
```

*To limit to non community center facilities, drop those facilities where factype==8
