Hello, I want to calculate the Neonatal mortality, Postneonatal mortality, Infant mortality, Child mortality, Under-five mortality rates of all Indian states separately by wealth quintile. I need 3 separate table by residence (Urban, Rural, Total) somewhat similar to Table 7.2 of NFHS 5 (2019-21) report. Can you please help me with the detailed STATA code.

Following is a response from DHS staff member, Tom Pullum:

So you want the 5 standard rates for 36x5x3 = 540 subpopulations, not counting subtotals? And I assume n's and confidence intervals? Sorry, but DHS cannot help with this.
