I want to merge PDHS data with GIS data. In this, I am interested to find average temperature for each month of years (2012-2018) like Mar 2014, April 2016 and so on. Is there a way that I can get this data?

Following is a response from DHS Senior Geospatial Data Scientist, Ben Mayala:

For temperature data, they can use sources provided in this document [https://spatialdata.dhsprogram.com/references/DHS\\_Covariates\\_Extract\\_Data\\_Description\\_3.pdf](https://spatialdata.dhsprogram.com/references/DHS_Covariates_Extract_Data_Description_3.pdf)

To access GPS datasets, please login to your account at:  
[https://www.dhsprogram.com/data/dataset\\_admin/login\\_main.cfm](https://www.dhsprogram.com/data/dataset_admin/login_main.cfm)

Select: Project | Select: Request additional countries/datasets for this project | Choose Region  
Click on "Show GPS datasets" (see sample screen capture below)

The page will refresh with a new column of checkboxes allowing you to request GPS datasets.  
If you encounter any problems, please watch this video <https://youtu.be/iGJHR6aA03E>
