The variables connected to stunting all appear to be missing all values in the 2022 PHL dataset. I'm using the Household Members folder and looking for relevant variable - they are all there, but empty. Was there an issue during data collection, or am I doing something wrong here? I've checked the other data files from this survey too and same issue for relevant variables.

Following is a response from DHS staff member, Tom Pullum:

That survey did not include measurements of height and weight.
