I am working with a project where I need to look into maternal education's effect on immunization of kids, how to extract data for maternal education of these immunized kids from KR file, (my dataset for immunized kids are living children age 1223 months and who got one dose of BCG vaccine, which protects against tuberculosis three doses of DPT vaccine, which protects against diphtheria, pertussis (whooping cough), and tetanus, three doses of polio vaccine, one dose of measles vaccine)

Also, how to control for wealth quintile, caste, religion for these mothers from KR file?

It would be really helpful if someone can guide me.

Thank you in advance.

Following is a response from Senior DHS staff member, Tom Pullum:

If you look through the forum you will find many related questions and responses. You will also see that your post is much more general and vague than what typically comes to the forum.

The Guide to DHS Statistics and the final reports on the India surveys may be useful.

Unfortunately, DHS staff cannot help you. Perhaps another user will volunteer some advice.
