Subject: Decomposition of Wagstaff
Posted by Lamine on Sun, 14 Jul 2024 11:54:59 GMT

Hello
Hello
I am a student and I have a research topic on trends in socioeconomic inequalities in the use of modern contraceptives in Burkina Faso from 2003 to 2021.
My socioeconomic variables are: wealth quintile and education level of the woman and the health variable is binary coded 1 "yes" and 0 "no".
I am requesting help for the decomposition of the wagstaff concentration index in order to estimate the contribution to inequalities related to wealth and education.
Thank you
