Hello,

I am analyzing the uptake of the second dose of the measles and rubella vaccine in Kenya based on the 2022 survey. How do I differentiate between the first and second doses of the measles vaccine in the ZZIR622FL data set from Kenya?

The variable H9A is not available in the data set.

Damaris

Following is a response from DHS staff member, Tom Pullum:

In the KR file for this survey, h9 and h9a are the variables for the first and second dose of measles vaccine, respectively. See the unweighted table of frequencies below. I found these variables by entering "lookfor measles".
