Hello,

I have been trying to find out whether folate data are available for the Rwanda DHS 2019-20. The Survey Characteristics Search suggests the folate data to be available. However, when I skimmed through the Supplemental Report for Micronutrients, I noticed that there is no table describing folate status, while there are tables for vitamin B12, iodine, ferritin, etc.

Could an expert kindly look into this and let me know:

- (i) are folate data available;
- (ii) if available, the variable name(s) that I should focus on; and
- (iii) the variable names for CRP, vitamin B12 and ferritin.

Many thanks!

Following is a response from DHS Lead Nutrition Research Associate, Rukundo Benedict:
The folate data are not yet available and not included in the micronutrient report nor in the released dataset. The variable names (for CRP, vitamin B12 and ferritin) are included in the dictionary for the RW micronutrient dataset. Let us know if you have other questions.
