Hi Team,

I will appreciate your kind guidance on calculating the plot of quantile residuals for adjusted logistic regression models after using the svy command for the DHS data set

Thanks

Following is a response from Senior DHS staff member, Tom Pullum:

After an estimation command--logistic or other, adjusted or unadjusted, with svy or without svy--you can use the "predict" command. It has several options. Enter "help predict".

We cannot provide more help. This is a Stata question, separate from DHS data.
